Khant Wai Yan

Full Stack Software Engineer

khantwaiyan11@gmail.com | GitHub | LinkedIn | Portfolio | +66 98 572 0280 | Bangkok, Thailand

Summary

Full-Stack Software Engineer experienced in working directly with business owners to define product requirements, translate operational needs into technical solutions, and build production-ready applications end-to-end. Builds and owns delivery across frontend, backend, APIs, databases, authentication, automation, and production deployment.

Technical Skills

Languages:	JavaScript, TypeScript, Java, Python, SQL
Frontend:	React.js, Next.js, Tailwind CSS, shadcn/ui, Redux
Backend:	Node.js, Express.js, REST APIs, JWT, OAuth
Databases & Cache:	MongoDB, PostgreSQL, Oracle DB, Redis
DevOps & Tools:	GitHub Actions, Nginx, PM2, Hostinger VPS, Vercel, AWS EC2
Testing & Integrations:	Jest, Postman, Puppeteer, Cheerio, Stripe, Cloudinary, Brevo, Resend

Work Experience

Freelance Full-Stack Software Engineer | HT E-commerce Platform *Jul, 2025 - Present*

- Built and maintained a MERN-based e-commerce platform, delivering a customer storefront and administrative dashboard for product management, payments, and order fulfillment.
- Implemented secure authentication using JWTs in HttpOnly cookies, Redis-backed refresh-token rotation, Google OAuth, and role-based authorization to protect customer accounts and administrative operations.
- Developed a manual QR-payment verification workflow with automated order-total calculations, receipt uploads, and administrative review states for approving, rejecting, or requesting corrected payment evidence.
- Automated product data extraction from three external websites using Puppeteer and Cheerio, retrieving titles, description, images, and color-size variants in approximately 5-10 seconds per product.
- Developed a URL-based product import workflow that populates product details for admin review and one-click publishing, eliminating manual data entry and image uploads for 100+ imported products.
- Implemented dynamic exchange-rate pricing using Server-Sent Events (SSE) and order snapshots to preserve checkout prices, exchange rates, and delivery fees for payment reviews and refunds.
- Developed an order-tracking system with independent payment and fulfillment states, enabling administrators to manage order progress and customers to monitor delivery status.
- Deployed and maintained a production API on a VPS using Nginx and PM2, implementing health checks, monitoring, request validation, and rate limiting.

Software Developer | Fleet Management & Financial Dashboard *Nov, 2024 - Present*

- Built and maintained a PERN-based fleet management application for a 20-vehicle taxi business, digitalizing driver assignments, repairs scheduling, and license renewal workflows.
- Implement IndexedDB-based local caching to maintain access to fleet records during connectivity interruption.
- Implement record-version checks to detect concurrent updates and unique operation identification to prevent duplicate write operations during retries.
- Developed an expected-income dashboards using configurable vehicle rates and non-paying day exclusions, providing business owners with visibility into projected revenue.

- Built an append-only driver deposit ledger supporting deposits, deductions, refunds, and traceable financial adjustments to calculate refundable balances and preserve transaction history.

Freelance Frontend Developer | Tops and SKT (Local Computer Shops) *Apr, 2023 - Aug, 2023*

- Developed responsive React.js frontends for two local computer businesses, translating client requirements into user interfaces and optimizing reusable components.

Junior Software Engineer | MPT (Myanmar Posts and Telecommunications) *Sep, 2022 - Feb, 2023*

- Developed Spiring Boot API functionality to create, retrieve, and update transaction records, including basic financial calculations for an internal financial tracking application.
- Wrote automated test cases for transaction functionality, verifying input validation, financial calculations, and expected results, alongside manual testing.
- Executed Oracle SQL queries to enable or disable application features for all users or selected users, supporting features access management.

Projects

Personal Portfolio & Content Management System

- Built, deployed, and maintained a full-stack portfolio and blogging platform using Next.js, React, TypeScript, and PostgreSQL, with public pages, protected admin routes, and modular database access.
- Implemented secure admin authentication using Argon2id password hashing, PostgreSQL-backed sessions, hashed session tokens, HttpOnly cookies, and database-backed login rate limiting.
- Developed a PostgreSQL-backed CMS with authenticated Server Actions for blog publishing and optimistic concurrency control to prevent conflicting edits from overwriting newer content.
- Build a Markdown editing workflow with server-rendered preview, content validation, and browser-session draft recovery to protect unsaved changes.

Education

University of Sunderland - B.Sc. Computer Systems Engineering, First Class Honours *July, 2022*
Gusto University - HND in Computing (Software Engineering) *January, 2022*
Wall Street English - Diploma in English *January, 2022*
